

# Portfolio Opportunity Ranker

IHS Markit's Portfolio Opportunity Ranker (POR) combines your data with 35,000 scout prospects to visualize play opportunities and risks, predict the number of unidentified prospects in proven areas and compare volumes and values at the country level down to the block level. All in one place.

POR's spatial platform provides an interactive map of the world's remaining commercial volume. Calibrated with IHS Markit Vantage data and interactively varying oil price assumptions allows you to easily identify areas of the globe that are more resilient to volatile commodity prices

## Benchmark Assets

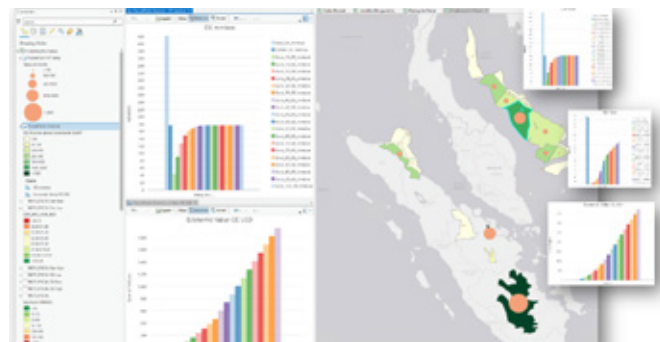

Want to know how your company stacks up against your peers? POR unlocks how your portfolio compares to others, where you excel and where you may lag behind. Use the same metrics for benchmarking, so you're comparing apples to apples for ultimate accuracy.

## From Geology to Economics

The value of a prospect is determined by more than just the volume of hydrocarbons in place. By pulling in drilling costs, accessibility to pipelines and production infrastructure, or modeling the volatility in commodity prices, POR helps you understand the true commercial value of yet-to-find resources.

Any polygon can be selected (ie. Country, Basin, license blocks etc.) and Portfolio Opportunity Ranker will display:

- the YTF volume (by hydrocarbon phase) and value
- the proportion of the YTF held by each company active in the selected polygons
- the gross vs. net equity for any of those companies at each oil price.

## Invest or Divest

POR helps companies evaluate, value and rank exploration and M&A opportunities in E&P. The platform creates a step change in commercial insights by streamlining manual workflows.

With POR, you can apply risk management beyond the known data points. It enables subscribers to modify all key exploration and commercial inputs and recalculate the volumes and value calculations with this information. The product provides risking and mapping evaluations for both identified and unidentified prospects.

The spatial platform of the Portfolio Opportunity Ranker product provides users with an interactive global view of the remaining commercial volume in map form. The integration of the IHS Markit Vantage data and the ability to interactively vary oil price assumptions allows users to easily identify areas of the globe that are more resilient to volatile commodity prices.

## Determine fair divestiture valuation

When it is time to sell, how do you know the fair price of your exploration portfolio or if you are choosing the right asset to remove from your portfolio? With its myriad of inputs and machine learning algorithms, POR helps you value the future exploration potential of an M&A target, better estimate the value of a farm-out or farm-in block and justify portfolio relinquishments. This data helps you determine fair prices, so you don't overpay or undersell.

## Improve analysis with your own data

POR is delivered in a GIS database platform with software that enables you to modify all key inputs. The workflow is simple and industry standard – it is customizable and not a black box. You can improve your analysis by importing your proprietary data. It is easy to focus on the parameters that make the most sense for your company or area of interest.

By substituting your own prospect evaluations and commercial inputs, the YTF engine can be re-run to provide a bespoke version of the product where you can view your own portfolio within this global context.

Portfolio Opportunity Ranker puts all of your prospects in one map. Derisk, quantify and evaluate the geology, commerciality and economics of prospects and yet-to-find across the globe.
